

Performance Testing

Date	05 October 2026
Team ID	SWTID-2026-3533
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how the ComicCraft system behaves under expected and peak load conditions. The sections below document the testing approach, tools, scenarios, results, and assigned responsibilities.

Team Member Work Assignment

S.No	Team Member	Assigned Work
1	C.Iswarya	Step 1 – Testing Overview: testing tool, testing type, target module/API, test environment and test date.
2	Hasini.D	Step 2 – Test Scenarios: prepare scenarios, virtual users, duration and expected outcomes.
3	Ramya.A	Step 3 – Performance Test Results: record response time, throughput, error rate, CPU and memory results.
4	Nandhini	Step 4 – Observations & Analysis: summarize the performance results and identify key findings.
5	Nivetha.K	Step 5 – Screenshots / Evidence: collect and attach testing-tool screenshots or output evidence.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman / JMeter (as applicable to the project implementation)
Type of Testing	Load Testing and Stress Testing
Target Module / API	ComicCraft Gemini-based comic story generation module / API
Test Environment	Local / Cloud-hosted environment used for the project
Test Date	05 October 2026
Responsible Member	C.Iswarya

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Generate a comic story with a normal user load.	10	60	Story is generated successfully with acceptable response time
2	Generate multiple comic stories concurrently.	25	120	System handles concurrent requests without major delays
3	Increase user load to observe system behaviour.	50	120	System remains stable and responds without critical errors
4	Stress test the story-generation API under peak load.	100	180	System handles peak load or reports controlled failure

Responsible Member: Hasini.D

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)
1	Response Time (Avg)	< 2 seconds	To be recorded	Pending
2	Response Time (Max)	< 5 seconds	To be recorded	Pending
3	Throughput (Req/sec)	Higher is better	To be recorded	Pending
4	Error Rate	< 1%	To be recorded	Pending
5	CPU Utilization	< 80%	To be recorded	Pending
6	Memory Utilization	< 80%	To be recorded	Pending

Responsible Member: Ramya.A

Step 4: Observations & Analysis

Record whether ComicCraft remains responsive as the number of users increases. Compare average and maximum response times with the target values, review throughput and error rate, and note CPU and memory utilization. Identify any bottlenecks or failures and mention possible improvements.

Responsible Member: Nandhini

Step 5: Screenshots / Evidence

Attach screenshots of the performance testing tool results below, such as JMeter reports, Postman results, Locust graphs, k6 output, or other relevant evidence.

Evidence 1	Paste performance testing screenshot here
------------	---

Evidence 2	Paste performance graph / report here
-------------------	---------------------------------------

Responsible Member: Nivetha.K
